

Section 1: User Guide

Welcome to the INTELLIDEN ecosystem. This guide explains how to interact with the three main interfaces designed for Marcus, our lead persona.

1.1. Mobile Application (iPhone)

- **Conflict Management:** If a priority conflict appears (e.g., Temperature mismatch), tap the amber notification card.
- **Resolution:** Choose between "Override", "Compromise", or "Accept" to instantly sync settings with other users.

1.2. Smartwatch (Wearable)

- **Detection:** Walk towards the smart lock; the watch will vibrate and show the "Locked" status.
- **Gesture Unlock:** Perform a sharp "wrist flick" gesture. The interface will transition to "Gesture Detected" and then "Unlocked" without needing touch input.

1.3. AR Headset (Mixed Reality)

- **Spatial Scan:** Look at the HVAC unit. The system will automatically overlay a digital twin interface.
- **Diagnostic:** Select "Diagnostic Mode" from the floating menu to see internal component status.
- **Action:** If an error is found (e.g., Blocked Filter), tap the virtual "Order Part" button.

Section 2: Statement of AI Use

In accordance with the project requirements, I hereby declare the use of Artificial Intelligence

(Gemini 3 Flash) in the development of the INTELLIDEN project.

Extent of AI Collaboration

The AI model acted as a **co-pilot and expert consultant**, contributing to approximately **25% of the total project workflow**. While the visual execution and manual assembly in Figma were performed by the student, the AI provided a part and advice on the foundational logic and structural framework.

Key Contributions:

Area	Description of AI Assistance
Conceptualization	Defining the help with personas and bringing forward the brand identity
Technical Support	Guidance for certain issues with Figma (using frames, components, and Prototype mode).
Documentation	Helping with typing errors and clearer formatting as well as providing a clear starting point for certain information

Note: All design decisions (colors, layout balance, interaction triggers) were finalized by the human designer to ensure the prototype reflects a personal creative vision.
